

ENVIRONMENTAL QUALITY FOR RESILIENT AND SUSTAINABLE CITIES IN BRASIL

Code: 5396-00

Country: Brasil

Starting year: 2024

Year completed: 2027

Objective

Develop mechanisms to encourage the adoption of sustainable practices aimed at improving environmental quality and climate resilience in Brazilian municipalities.

NBS ANSWERS

How has IICA integrated NbS into its projects?

This project is associated with Nature-based Solutions (NbS), especially with regard to the objective of structuring mechanisms to stimulate urban and peri-urban agriculture, green infrastructure and climate resilience in Brazilian municipalities.

The main expected results related to NbS are:

- Technical materials produced and technological tools planned, oriented to support municipal management of green areas, biodiversity and urban trees; and initiatives and techniques related to 'Nature-based Adaptations (AbE)' and 'Nature-based Solutions (NbS)', systematized for dissemination to Brazilian municipalities.
- Project under implementation, still without significant results related to NbS.

Note: The project is under development
